LAB PGM 7 – Blowfish Algorithm

```
import java.util.*;
import javax.crypto.*;
import javax.crypto.spec.SecretKeySpec;

class blowfish {
    public static void main(String[] args) throws Exception {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter message: ");
        String message = sc.nextLine();

        System.out.print("Enter secret key: ");
        String keyText = sc.nextLine();

        SecretKeySpec key = new SecretKeySpec(keyText.getBytes("UTF-8"),
"Blowfish");

        Cipher c = Cipher.getInstance("Blowfish");

        // Encryption
        c.init(Cipher.ENCRYPT_MODE, key);
        byte[] encrypted = c.doFinal(message.getBytes("UTF-8"));

        System.out.print("Encrypted text: ");
```

```
        for (byte b : encrypted)
            System.out.printf("%02X", b & 0xFF);

        // Decryption
        c.init(Cipher.DECRYPT_MODE, key);
        byte[] decrypted = c.doFinal(encrypted);

        System.out.println("\nDecrypted text: "+ new String(decrypted, "UTF-8"));

        sc.close();
    }
}
```
